Concept and characteristics

- High engine output with automatic engine speed control
- Controlled entirely from cab
- Sturdy and solid rig design
- Solid parallel kinematics on the basic machine
- High pull and push forces
- High torque
- Completely self-rigging (no auxiliary machines required)
- Large range of working tools (all common drilling works can be performed)
- Stepless leader inclination 5° forward - 15° backward depending on type of equipment
- Automatic vertical alignment
- High alignment forces
- Simultaneous control of several movements via Load-sensing multi-circuit hydraulics
- Quick assembly of rotary possible through quick connection
- Equipment design according to latest European regulations and standards
- All components designed to fulfill the special requirements of a drilling rig
- High manufacturing quality through quality control by PDE®-system
**Dimensions**

**Basic machine LB 36**

**LB 36 standard**

**LB 36 with optional equipment**

**Technical data**

- Total height: 27.55 m* 26.2 m
- Max. pull, leader on ground: 400 kN
- Max. torque: 366 kNm
- Stepless leader inclination: ± 5°
- Lateral inclination: ± 5°
- Forward inclination: 5°
- Backward inclination: 15°

**Operating weight**

- Total weight with 900 mm 3–web shoes: 119.5 t* 114.3 t
- Total weight with 1000 mm 3–web shoes: 120.2 t* 115.0 t

The operating weight includes the basic machine (with rotary and Kelly bar MD 36/3/30) and 20.5 t (22.5 t*) counterweight.

*) With optional equipment.
Transport dimensions and weights

Transport with leader
includes the basic machine (ready for operation) with leader, without working tools (such as rotary, Kelly bar etc.) and without counterweight.

Dimensions and weights
Weight complete without counterweight (80 t*) 78.5 t

Transport with leader - without crawlers
includes the basic machine with jack-up system (ready for operation) with leader, without crawlers, without working tools (such as rotary, Kelly bar etc.) and without counterweight.

Dimensions and weights
Weight complete without counterweight (61 t*) 59.5 t

Transport leader
includes the leader without working tools (such as rotary, Kelly bar etc.).

Dimensions and weights
Weight complete (28 t*) 26.5 t
Lower part of the leader (1.8 t*) 1.8 t
Upper part of the leader with leader top (6 t*) 4.9 t

*) With optional equipment.
Transport dimensions and weights

**Transport basic machine**
ready for operation, without counterweight.
Transport weight (without jack-up system) 52 t

**Counterweight (Standard)**
Counterweight I 10.2 t
Counterweight II – 2x 5.2 t

**Counterweight (Optional)**
Counterweight I – 2x 6.0 t
Counterweight II – 2x 5.2 t

**Rotary (Standard)**
Transport weight
BA 360 9 t

**Rotary (Optional)**
Transport weight
BA 360 10.8 t

**Transport basic machine - without crawlers**
ready for operation, without counterweight
Transport weight (with jack-up system) 33 t

**Transport crawler**
Crawler left 10.1 t
Crawler right 10.1 t

Weights can vary with the final configuration of the machine. The figures in this brochure may include options which are not within the standard scope of supply of the machine.
Rotary BA 360 with shock absorber

- 2-stage-gear drive for flexible adaptation to soil conditions
- Due to stepless speed control via joystick optimum and precise alignment and rock drilling is possible even at low speed levels; it is not required to preselect an operating mode
- Kelly shock absorber and rubber bearing relieve the material and reduce noise emission
- Thanks to the Kelly shock absorber the Kelly bar is guided at greater length
- Various drive adapters provide compatibility with other systems

Technical description

**Engine**

Power rating according to ISO 9249, 350 kW (469 hp) at 1900 rpm

- Engine type: Liebherr D 846 L A7
- Fuel tank: 700 l capacity with continuous level indicator and reserve warning

Engine complies with NRMM exhaust certification EPA/CARB Tier 3 and 97/68 EC Stage III A.

**Hydraulic system**

The main pumps are operated by a distributor gearbox. Axial piston displacement pumps work in open circuits supplying oil only when needed (flow control on demand). The hydraulic pressure peaks are absorbed by the integrated automatic pressure compensation, which relieves the pump and saves fuel.

- Pumps for working tools: 2x 350 l/min
- Separate pump for kinematics: 180 l/min
- Hydraulic oil tank: 800 l
- Max. working pressure: 350 bar

The cleaning of the hydraulic oils occurs via an electronically monitored pressure and return filter. Any clogging is shown on the monitor in the cab. The use of synthetic environmentally friendly oil is also possible.

**Crawlers**

The track width of the undercarriage is changed hydraulically. Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, maintenance free crawler tracks, hydraulic chain tensioning device.

- Drive speed of telescopic undercarriage: 0 – 1.34 km/h
- Track force: 745 kN
- Width of 3-web track shoes: 900 mm
- Transport width: 3500 mm

Option:

- Width of 3-web track shoes: 1000 mm
- Transport width: 3600 mm
- 2 speed hydraulic motor for higher travel speed

**Swing**

Consists of triple-row roller bearing with external teeth and one swing drive, fixed axial piston hydraulic motors, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion. Selector for 3 speed ranges to increase swing precision. Swing speed from 0 – 3.5 rpm is continuously variable.

**Control**

The control system - developed and manufactured by Liebherr - is designed to withstand extreme temperatures and the many heavy-duty construction tasks for which this machine has been designed. Complete machine operating data are displayed on a high resolution monitor. A GSM modem allows for remote inquiry of machine data and error indications. To ensure clarity of the information on display, different levels of data are shown in enlarged lettering and symbols. Control and monitoring of the sensors are also handled by this high technology system. Error indications are automatically displayed on the monitor in clear text. The machine is equipped with proportional control for all movements, which can be carried out simultaneously.

Two joysticks are required for operation. Pedal control can be changed to hand control.

Options:
- PDE®: Process data recording
- GSM modem

**Kelly winch with freewheeling**

- Line pull effective (2nd layer): 300 kN
- Rope diameter: 34 mm
- Line speed: 0-71 m/min

Option:
- Line pull effective (2nd layer): 400 kN
- Rope diameter: 38 mm
- Line speed: 0-59 m/min

**Auxiliary winch**

- Line pull effective (1st layer): 100 kN
- Rope diameter: 20 mm
- Line speed: 0-89 m/min

**Rope crowd system**

- Crowd force (push/pull): 400/400 kN
- Line pull (effective): 200 kN
- Rope diameter: 28 mm
- Travel of working tool: 18.5 m
- Line speed: 0-70 m/min

The winches are noted for compact, easily mounted design. Propulsion is via a maintenance-free planetary gearbox in oil bath. Load support by the hydraulic system; additional safety factor by a spring-loaded, multi-disc holding brake. All line pull values are effective values. The efficiency factor of approx. 25% has already been deducted.

**Noise emission**

Noise emissions correspond with 2000/14/EC directive on noise emission by equipment used outdoors.
**Process data recording system - PDE®** (additional equipment)
The Liebherr process data recording system PDE® constantly records the relevant process data during the working process.

Depending on the application the recorded and processed data are displayed on the PDE® touchscreen in the operator’s cab, e.g. in the form of an online cast-in-place pile.

At the same time the PDE® is operated using this touchscreen. The operator can enter various details (e.g. jobsite name, pile number, etc.) and start and stop recordings. A recording of every start-stop cycle carried out in the PDE® is established on a CompactFlash memory card.

The PDE® can be configured in a number of ways, e.g. for the connection of external sensors, for the generation of a simple protocol as graphic file and/or for a printout directly in the operator’s cab.

**Process data reporting - PDR** (additional equipment)
Comprehensive data evaluation and generation of reports on a PC is possible using the software SCULI PDR.

- **Recordings management** - The recordings generated by the PDE® system can be imported and managed in SCULI PDR. The data can be imported directly from the CompactFlash card or via the Liebherr telematics system LiDAT. Certain recordings, e.g. for a particular day or jobsite, can be found using filter functions.

- **Viewing data** - The data in each record is displayed tabularly. Combining several recordings provides results, for example, regarding the total concrete consumption or the average depth. Furthermore, a diagram editor is available for quick analysis.

- **Generating reports** - A vital element of SCULI PDR is the report generator, which allows for the generation of individual reports. These can be printed out directly or stored as pdf files. In the process the size, colour, line thickness or even the desired logo can be configured. Moreover, the reports can be displayed in different languages, e.g. in English and in the national language.
